

ABSTRACT OF THE DISCLOSURE

5 The present invention relates to a method of processing postal matters in an automatic address-reading system, an image of the surface of each article of mail having address information being obtained and delivered to a first automatic evaluation system, and incorporately evaluated address information being delivered for evaluation to a first video coding system. It is provided that the address information of those images which have not been completely evaluated in the video coding system are delivered, using the results of the video coding system to another automatic evaluation system.
